Ans: 1 Red data book

An. biodiversity, Red data book refers to the collection record of the endangered species.

So, the species which are collectively endangered and are kept into the common areas for their protection.

Eg. Orchidaceae family members few species which are not found in today's period of time but having the various records on the red data collection.

Endangered species

Species which are still living but facing kept into the protected area for their survival.

- Some threatened level are assigned with these species.

All species

level of biodiversity conserved (data species)

IUCN: International union for conservation of nature.

NBICAR National Bureau of Plant Genetic Resources.

It kept in ICAR in Delhi, that has ability to profound all the genetic records of plants.

- Various activities such as, - Germplasm

- Cryopreservation

- Seed germination etc, shows the important values

for the various genetic activities.

National Parks

National Parks are included into Protected Area Network (PAN).

• Few species can be altered into the areas where they can be protected from the environment or other organisms.

Some National Parks are: • Jim Corbett → Uttarakhand.

• Rathambore → Rajasthan

• Kanha → Madhya Pradesh.

• Gir forest → Gujarat.

Seed banks Seed banks are the areas where all the seeds should be kept for the protection and further use of the same.

• Activities of various agricultural fields should be considered as the various functions of the seed banks.

1. cy karyotype analysis : chromosome analysis are basis on the size, position and number of the chromosome present in the sequence.

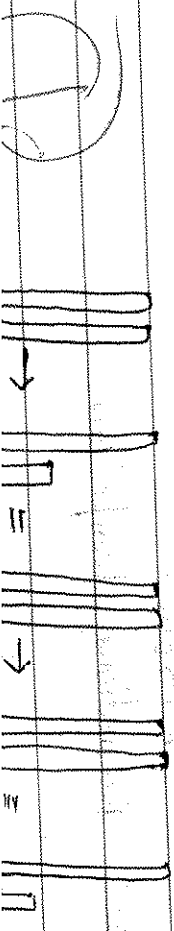

Various alterations are shown i.e. p = short arm, q = long arm
 del = deletion, dup = duplication, inv = inversion etc.

2) B-chromosome : B-chromosomes are accessory chromosomes.

In various plants collectively data should be superficial than to make a alliance with other chromosome to its characteristic morphologically.

3) Dosage compensation : It is defined as equalize of genes into different organism.

(Inactivation of one chromosome)

③ Ozone layer

It is a layer of ozone which is present at the lower part of atmosphere of earth. This ozone layer is present at the stratosphere layer of earth. This layer is present from ground to about 15 km high.

Ozone layer performs an important function. The function of ozone layer is to protect the earth's environment from ultraviolet rays coming from the sun. Ozone layer block 99% of UVB rays. Ozone layer place an important place in our life.

The molecular formula of ozone is O_3 .

- ③ Particles of soil / tiny clothes (cause of pollution). The pollution cause by excess of tiny soil particles in the air generated or produce due to the low level of infrastructure such as roads, pavements are also for major cause of air pollution. These tiny particles are spread in the air and also snow very harmful effect on the human beings such as Allergic, Skin Rash, itching of eyes and also affect our lungs in shales, including these particles, and gases from vehicles and industries are the major cause of pollution.
- Our Capital Delhi is the most polluted capital of the world in the recent survey done by an international agency.

Ques-1 (a)

Ans- Green House Gases :-

Green house gases are the main cause of global warming. In green house effect, the sun's rays (short wave radiation) are absorbed by the earth's surface and re-emitted as long wave radiation (infrared). This radiation is absorbed by the greenhouse gases, which then re-radiate the energy in all directions, including back towards the earth. This process is known as the greenhouse effect. To reduce greenhouse gas emissions, we can use energy-efficient light bulbs, turn off lights and electronics when not in use, and use public transportation or carpooling.

Ques-1 (b) Ans- Open cast mining :-

Open cast mining is a method of extracting minerals from the earth's crust. It involves the removal of overlying soil and rock to access the ore. This method is used for large-scale mining of minerals like coal, iron ore, and limestone. It is a highly visible and disruptive process, often leading to significant environmental damage and the need for extensive reclamation efforts.
